

» **zedas[®] cargo** -
Logistics Management for
long-haul traffic

Railbound undertakings and their partners are facing specific challenges currently. The ability to ensure the transparency for operational structuring and accounting are substantial for long-term success in the competitive environment of rail freight. For national and international freight carriers and railways with various levels of regional specialisation applies the following:

Intelligent and integrated data processing capable of coping the data load is the basis for successful action in the market.

zedas[®] cargo manages, controls, monitors and documents all freight transport movements, starting from calculation and contract management, through its execution and control, all the way to accounting.

A sophisticated set of rules and regulations and freely configurable workflows with plausibility checks ensure secure and optimal operation. In addition, the solution has an impressively high level of configurability.

The solution convinces in international traffic through its complex multitenancy and universal multilingualism.
