

» zedas® cargo -
Logistics Management for
on-site traffic

Railway undertakings operating on industrial, harbour or terminal ground as freight carriers that collect and distribute wagons and load units destined for different loading points make high demands when it comes to the organisation and implementation of the logistic process. Shunting trips must be processed on time, reliable and safe, using as few resources as possible and carried out in the shortest possible time. All involved parties provide valuable information for an effective completion of the transport process.

Various company units, customers and systems must be directly incorporated into the logistic process. Subsequent tasks such as detailed invoicing of the service provided and effective controlling are just as important.

A specialized, experienced team comprising rail consultants, software designers and system integrators ensure the smooth introduction of the software solution.

» **Benefits**

With zedas® cargo, you benefit from **transparent accounting processes, an effective use of required resources, minimisation of manual data input, lowered demurrage payments and comprehensive integration of customers and partners.**

» **Optimise your Workflow**

By closely interlocking the **administrative and operational level**, processes in railway undertakings can be tightened and cost can be lowered - key factors for long-term success and competitive advantage. As a specialist for Rail Cargo Management, we offer a complete solution for the national and international freight carrier.

Functional highlights of zedas® cargo are:
